THE HEART OF YOUR EMERGENCY DEPARTMENT

## WELLSOFT® EDIS CUSTOM SOLUTIONS

### CCOW compliant version of Wellsoft EDIS ~ Duke University Health System

- Enables access to multiple systems using a single log-on. Using the context manager provided by the Sentillion product, Vergence, Wellsoft supports the User, Patient and Encounter subjects. The user is on the same patient and same patient visit when switching between applications.

### Vitals Monitoring Interface/Biomedical Monitoring Interface ~ Duke University Health System

- Eliminates manual collection and notation of vitals. When a patient is connected to the vitals monitor, an HL7 ORU (result) message containing Vital Signs is sent to the Wellsoft system every 10 minutes. The system locates the appropriate patient account number and populates the data into a special "Vitals" notes field. The time is automatically stamped in the "Vitals" column on the Tracking Display.

### Admissions Track ~ Duke University Health System

- Streamlines the bed assignment process. Facilitates communication between the Emergency Department and Admissions Department without the need for telephone calls, forms, etc. Saves staff time and ultimately decreases patient waiting time in the ED.

### Medical Records Track ~ Frankford Hospital System

- Facilitates prompt administrative review of ED charts. Gives the physicians ability to access and complete charts from any facility in a multi-hospital system. Also reduces paperwork in the ED while minimizing the likelihood of losing pieces of a paper chart.

### CDC Early Warning ~ Santa Clara Valley Medical Center, Carilion Health System

- Tracks site-defined symptoms on a shift-by-shift basis. Triage Nurse can enter any number of presenting symptoms based on patient complaints via pop-up menu. A periodic report can then be auto-faxed or emailed to the local health department.

### 23hr Observation Track ~ Children's Hospital of Philadelphia, Duke University Health System & Pitt County Medical Center

- Tracks patients that will be in the ED for an extended period of time separately from other patients.

### Instant Access Key ~ Duke University Health System

- Provides immediate access to the Internet, intranet or another frequently used application. Multi-Discipline Documentation Template ~ North Oaks Medical Center, Carilion Health System
- Provides versatile template for use by ancillary services to document disciplines such as Respiratory Therapy, Social Work, Chaplain, Case Manager and Psychiatric.

## WELLSOFT® EDIS CUSTOM SOLUTIONS (CONT.)

### **Patient Care Plans** ~ Duke University Health System

- Provides specialized care for certain patients. An unlimited number of custom patient care plans can be stored. Patients with care plans are automatically identified on the Wellsoft tracking display when they arrive. The care plans can be easily viewed or copied into current visit.

### **Billing Recovery Track** ~ Moore Regional Medical Center, Alameda County Medical Center / Highland Hospital

- Tracks patients for financial screening. Enables the department to assist patients in developing alternative financial sources prior to the patient leaving the department. May enhance revenue for the Emergency Department.

### **Clinical Competency Tracking** ~ Children's Hospital of Philadelphia, Carilion Health System

- Enables ED administrators to keep track of the expiration dates of core competency areas such as CPR, ACLS, CEN and other necessary certification of staff members. Eliminates time-consuming work of ensuring that renewal dates are met.
