

Wellsoft® EDIS

Remote Access

Wellsoft Supports Remote Access to ED Patient Charts

Wellsoft EDIS, working within each hospital's security and communication protocols, can support Remote Access to ED Patient Charts.

Access is possible from any internet ready computer with secure login and access for physicians needing access to patient information after an Emergency Department visit.

Primary Care Physicians or Specialists, alerted by page, fax or email that their patient has been seen in the ED, can remotely access, view and print the selected patient chart.

Notification Options

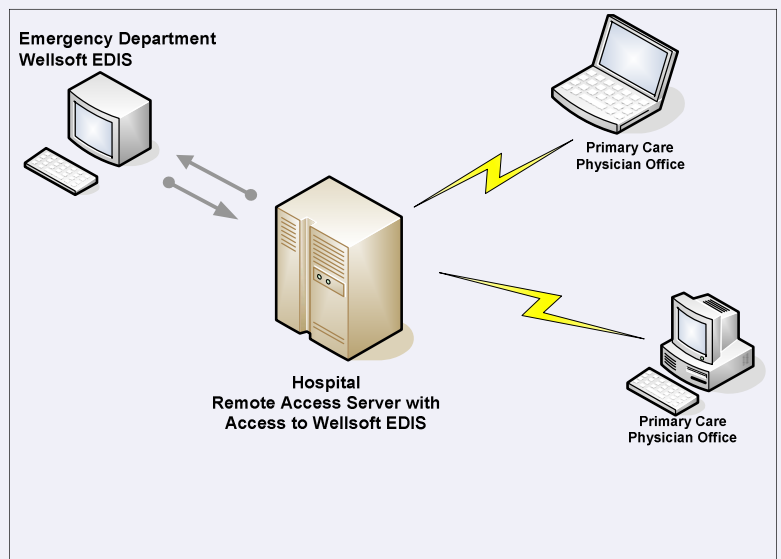

- Fax Alert
- Fax Disposition Summary
- Page Alert
- Email Alert

ED Patient Chart Access Options

Remote Access* (with secure login) via:

- RDP
- Citrix Client
- Web Based Option

**As defined by Hospital Security*

Benefits

For The Hospital/Emergency Department

- HIPAA Compliance – security privileges help maintain patient confidentiality
- Reduced Clerical Time & Documentation Costs
- Reduced Communication Costs (copying, faxing, mailing, telephone calls)

For Primary Care Physicians or Specialists

- Auto Page; Auto Fax, Auto Email Alerts
- Provides Access to Patient Charts after ED Visit
- Eliminates faxing patient records
- Multiple physicians can review a patient's chart
- Test results can be accessed as soon as they are available

For Patients

- Continuity of Care
- Saves time – patients do not need to wait for information to be sent
