

Wellsoft® EDIS

Risk Management Features

Risk Management is built directly into Wellsoft EDIS as part of a proactive system which identifies potential risks or procedural considerations for Emergency Department patient care. Reminders, alerts and decision support tools help the clinician to decide whether to accept the possible existing risks or just modify the current treatment plan for the patient.

Risk Management Features Included with every Wellsoft EDIS

- ✓ **Risk Management System** - comprehensive checks and flags based on system rules such as range checks and medication alerts based on patient's age and weight and warning messages for abnormal vital signs.
- ✓ **Medication Reconciliation** - meets The Joint Commission's current National Patient Safety Goals to decrease the possibility of medication errors such as omissions, duplications or drug interactions. Information sources, physician review and sign-off are captured.
- ✓ **Drug Dosing Calculator** - automatic weight based dosing calculations and alerts based on minimum/maximum doses are integrated into a medication display that works with orders and/or prescriptions.
- ✓ **Medical Record Flagging** - indicates if the patient has had a previous ED visit within hospital defined time intervals by flagging the Patient Tracking Display.
- ✓ **Medication & Allergy Display Location** - allergies and medications are highlighted and displayed in the same location on every patient chart.
- ✓ **Real-Time Alerts** - color coded alerts are reminders for re-evaluation, vital sign collection and reminders for insufficient documentation or open orders when discharging or admitting patients.
- ✓ **Mandatory Data Capture** - any data point can be made mandatory to help enforce compliance for pain scale, domestic violence screening, vital sign collection, TJC, state mandates, hospital policies or practice standards.
- ✓ **Unresolved Issues Management Tracking** - monitor post-discharge follow ups and track to resolution.
- ✓ **Wellsoft Links** - access to web based resources from within the Wellsoft application.
- ✓ **Discharge Instructions** - over 3,000 diagnosis specific aftercare instructions in English & Spanish.

Risk Management Features Available with Wellsoft EDIS

(select additional features for your Emergency Department)

- ◆ **Drug/Drug & Drug/Allergy Interaction Checking** - check for possible drug-drug interactions or allergy/hypersensitivity reactions automatically or on demand via an integrated Wellsoft Link.
- ◆ **Clinical Documentation** - includes built-in, required data entry elements. 90% of required clinical documentation is contained within the templates and pop-up boxes, pick lists and menus.
- ◆ **Clinical Decision Support** - record and report on CMS physician quality measures and The Joint Commission quality measures. Clinicians are reminded to record and perform applicable quality measures.
- ◆ **Medication Verification & Exchange** - Manage patient medication information and improve patient safety by electronically with bi-directional exchange and synchronization of codified home medication and prescription information across the hospital enterprise as well as medications administered in the ED.
- ◆ **Order Entry/Tracking & Results Reporting** - includes a prompting system to help avoid risks. Critical questions are asked when placing certain orders. The answer is stored so the clinician is not asked repeatedly, preserving speed and managing risk. Order Status and elapsed time is visible on the Patient Tracking Display; abnormal results are flagged.
- ◆ **Special Needs Patient Care Plans** - longitudinal records of patient specific protocols are automatically identified upon registration to maintain continuity of care.
- ◆ **CCOW** - seamless access to a patient's Lifetime Clinical Record from the ED record.
