THE HEART OF YOUR EMERGENCY DEPARTMENT

## WELLSOFT® EDIS TRACKING FEATURES

### Patient Tracking

including Risk Management System

Dynamic, color-coded patient tracking shows the status of the Emergency Department instantly. At a glance, see how long each patient has been waiting and for what they're waiting. Custom screens in each area of the department such as triage and fast track display only the data you want to see. Patients are tracked from pre-arrival through disposition and alerts for codes, time limits and test results are right on the tracking display.

From a PDA to a plasma screen, patient tracking can be viewed from any location or device, eliminating walks across the department to a grease board. See a global view of all patients in the department, across the enterprise, or display only your own patients. Patients can be sorted based on virtually any factor such as mass casualty, boarders, financial class or any other criteria.

- **Risk Management System**

The Wellsoft EDIS Risk Management System establishes the ability to implement complex risk management checks and flags during a patient's visit. Examples of current rules built into the system include medication alerts based on a patient's age and weight and warning messages for abnormal vital signs.

### Admissions Tracking

Immediate access to Emergency Department patient information enables admissions staff to assign a bed and notify the ED in real-time without the usual telephone calls, forms, etc. Admissions Tracking streamlines the bed assignment process, saving staff time and decreasing patient waiting time in the ED.

### Billing Recovery Tracking

Tracking patients based on financial designation enables the Emergency Department to assist patients in locating alternative financial sources. Financial screening interviews can be conducted prior to disposition based on the patient's financial designation.

### Clinical Competency & Certification Tracking

Up-to-date tracking of core competencies eliminates manual certification tracking. Automatically track the expiration dates of CPR, ACLS, CEN and other certifications, by nurse, physician and other staff, to ensure awareness of when certifications must be renewed.

### Unoccupied Rooms Display

Wellsoft can be configured to display unoccupied rooms on the Patient Tracking Display. With this new feature, Wellsoft can display both occupied and empty rooms together directly on the Patient Track Display. This new capability works in conjunction with the existing sort and filtering of the rooms displayed on the Patient Track Display, presented by Area of Care, Districts, Pods or for the entire Emergency Department.

### Medical Records Management Tracking

Prompt administrative review of Emergency Department charts can begin moments after the patient leaves the department using this display. Rapid feedback of documentation deficiencies promotes timely completion of the chart and initiation of the billing process. Emergency Department paperwork is reduced as is the likelihood of losing pieces of a patient chart.

# WELLSOFT

THE HEART OF YOUR EMERGENCY DEPARTMENT

## On Call Tracking

Allow emergency department staff to rapidly request consults from the institution's specialty service on-call list. On Call Tracking consists of a custom rolodex tracking view showing the medical specialty service, the provider's name, office phone, office fax, pager number, and hours of on-call service. Additionally, the information can be automatically logged into a patient's EMR by a single click, recording the clinician requesting the consult, the time of first, second, and third pages, the time of arrival to the department and the status of the consultant process. The feature includes two administrative reports: All calls log per provider / specialty / or date, and a time distribution graph of calls with status points per provider / specialty / date.

## Registration Tracking

Managing the registration process, including prioritizing patients for registration is simplified using this tracking feature. Registration Tracking not only expedites the process but also expands the number of reporting elements for quality improvement measures.

## Split Screen View

This feature significantly enhances the amount of patient information and status of the Emergency Department presented to the user. Each Split Screen view is interactive and can be configured to display information independently. For example, in a vertical side-by-side Split Screen view, the left half of the screen can be configured to display the Patient Track showing solely patients that are currently in beds in the Emergency Department. On the right half of the screen, the Patient Track can be configured to display only the beds still available in the Emergency Department. As patients are moved into and out of rooms, the Split Screen views reflect the changes dynamically. The Split Screen feature can be configured to present quadrant views of the Emergency Department as well.

## Unresolved Issues Management Tracking

Effectively monitor post-discharge follow ups like positive blood cultures, patient complaints, and other issues. Unresolved Issues tracking ensures that outstanding concerns are tracked until resolution.
